

Light compositions

Num lighting specializes in modular decorative light fixtures.

Num's innovative tile system design enables tremendous flexibility for composing distinctive lighting configurations, personalized according to unique tastes and preferences, bringing artistic mode to any space.

The modular tiles can be easily mounted on a surface in many shapes or patterns and can be customized to any project.

The layout of the tiles creates unique and infinite compositions which can be transformed to another as each tile can be easily turned on its axis, adding to the dynamic and versatility of the creation.

A unique modular lighting system

Num Lighting Tile System offers you unlimited flexibility to be creative and design your own layout configurations and pattern compositions according to your space and taste.

Each tile comes with a wall mount unit that functions as a hanging device, supplying electrical power and control to the tile. The wall mount unit easily conjugate to other units, to form a multiple tile system. The tile is magnetically attached to a wall mount unit. This allows to detach the tile, rotate it in 90°, 180° or 270° and reattach it, to form a new pattern.

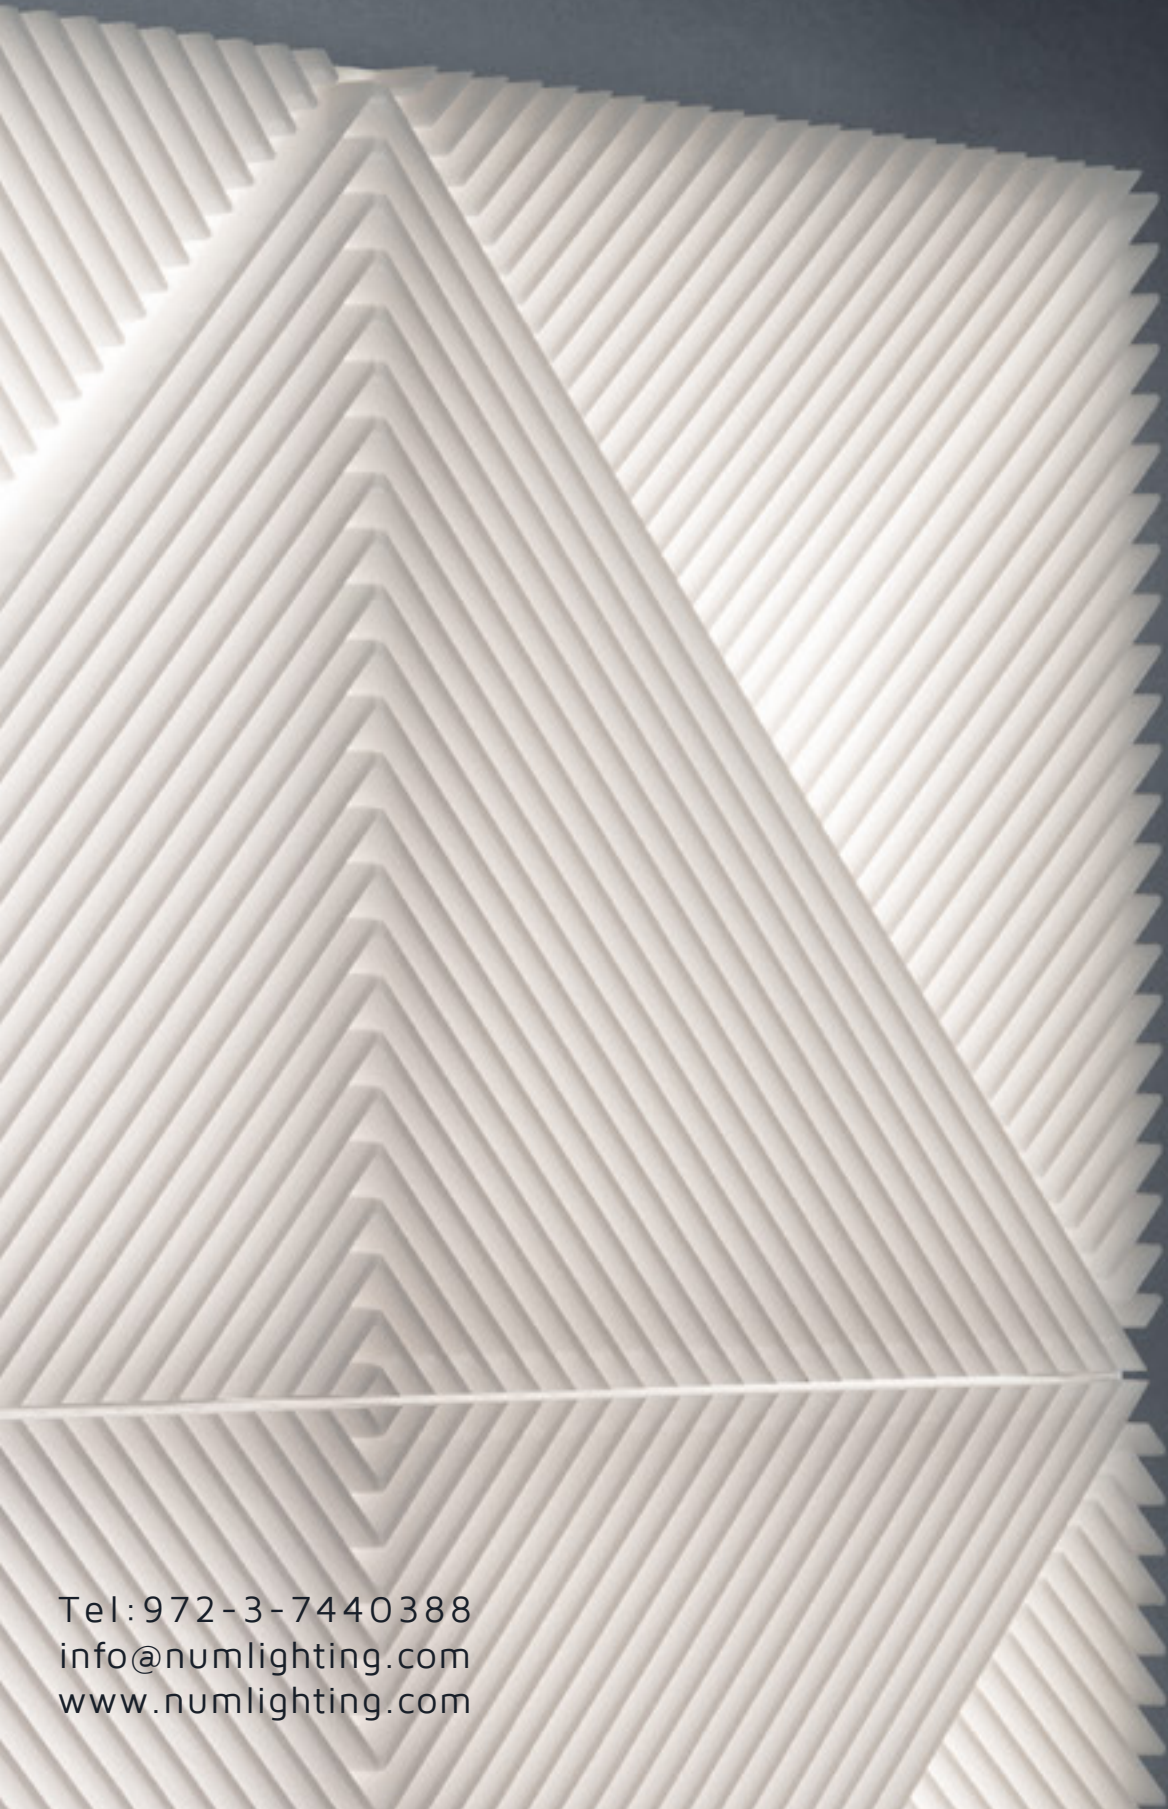

Installation and maintenance is easy. Tile installation does not need any special preparations and adjustments of the surface and is designed in a 'plug and play' manner.

The tiles can be dimmable and with a capability to change from cool to warm white light color by remote control. (5000k to 2800k)
